Bermuda Tile

MORE
than just
roofing

Roof Systems Bermuda Tile profile is a panel that is mounted horizontally, instead of vertically as is the case with most traditional roof panels. Each panel is 13" wide and is fastened with concealed fasteners, which make it both attractive and highly resistant to wind uplift and corrosion. This panel is one of our most modern and contemporary designs, although it is meant to imitate original roof designs which originated in Bermuda hundreds of years ago.

The panel is structural, meaning that it can be installed over open framing and does not require close boarding. It does, however, require vertical rafters at 24" centers rather than traditional rafters with horizontal battens. Because of its horizontal design, Roof Systems does not recommend the panel for low sloped applications. Instead, is ideally suited for roofs with a minimum 35 degree slope. It can also be used for cladding / siding.

HEAD OFFICE:
Lot #62, Frederick Settlement
Industrial Estate, Caroni.
