Circular Corrugated

MORE
than just
roofing

Roof Systems Circular Corrugated panel or sheeting (other names include traditional corrugation, galvanize profile etc.) is a profile that has been around for centuries; its timeless design and shape remain virtually untouched. Most popular with architects who want a traditional colonial look, this panel is both affordable and stylish in its own right. It can be roll formed in continuous lengths up to approximately 50 feet (limited by length of truck). The Circular Corrugated Panel is a structural panel that can span over open framing without the need for continuous deck support. Traditional applications have been almost every roof design imaginable as well as siding, hoarding and decking.

HEAD OFFICE:
Lot #62, Frederick Settlement
Industrial Estate, Caroni.
