Standing Seam

MORE than just roofing

The Series 2000 snap-lock panel system was the first roofing panel produced by Roof Systems and continues to be one of our most popular panels. It is ideally suited for a wide range of roof types and its clean lines and concealed fasteners make it one of our most attractive and durable products.

This panel can be roll formed on site in continuous lengths eliminating potential damage in transport to site and the need for joins / laps which contribute to deterioration of the panel. The Standing Seam Panel is a structural panel that can span over open framing without the need for continuous deck support.

Traditional use for this panel has been low sloped applications, but over the years this has evolved into steep roof applications, siding (cladding) and soffit panels.

HEAD OFFICE:
Lot #62, Frederick Settlement
Industrial Estate, Caroni.
